Ground floor plan M 1:200

1st Basement plan M 1:200

Present_ current construction does not meet the requirements for the President's villa

Situation_ we maintain the orientation and location of the existing villa

Atrium_ an essential element of our new building is the zen garden with a tree, which forms the center of the building, and thus symbolically points to today's environmental situation and turns attention to nature, a place for peace and thought

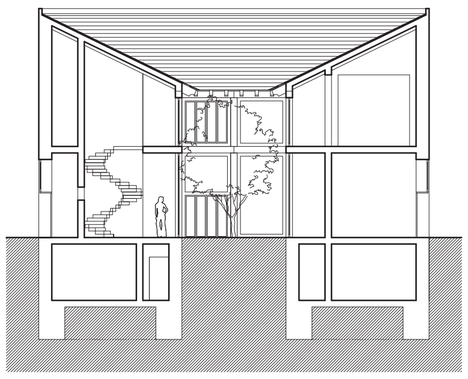

Square_ because of the impartiality of the building and the harmoniously divided layouts, where we regularly switch between technical and residential areas

Facade_ minimal, timeless, with a traditional touch, is based on the layout

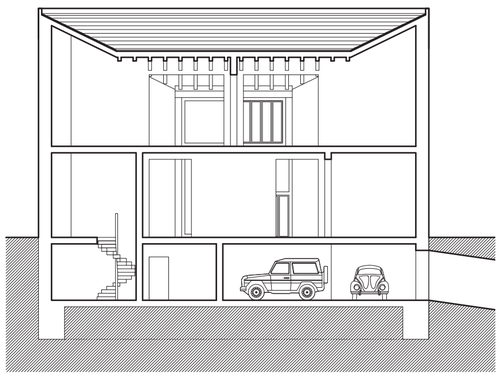

Rammed concrete_ is based on an ancient technique of dampened clay, which was typical of Europe, layers should at the same time evoke the landscape and complex layers of cultures

Wood_ natural, non-aging, warm, timeless material

Roof_ for better illumination of the atrium we designed a sloping roof that also draws water into the atrium, as a material we used wooden shingles that refer to the folk tradition of Slovakia

Section A-A´ M 1:200

Section B-B´ M 1:200

1st floor

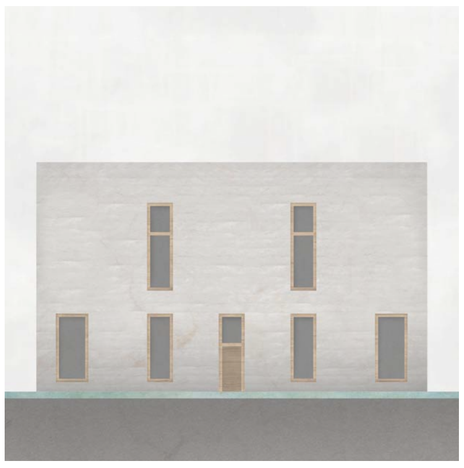

2.1	gallery	44,5 m²
2.2	president's office	21,1 m²
